

The main objective of this project is to analyze retail sales data to gain actionable insights that will enhance the performance of the Coffee Shop.

Start Your Day With Coffee

Recommended Analysis

- How do sales vary by day of the week and hour of the day?
- Are there any peak times for sales activity?
- What is the total sales revenue for each month?
- How do sales vary across different store locations?
- what is the average price/order per person
- Which products are the best-selling in terms of quantity and revenue?
- How do sales vary by product category and type?

Observations:

- The sales is mostly high on Thursday, Friday and Monday and low on Saturday and Sunday. According to hours the sales continuously increases before 11am and goes down after that.

- We can say that between 9 am to 10:30 am is the peak time for the sales activity.

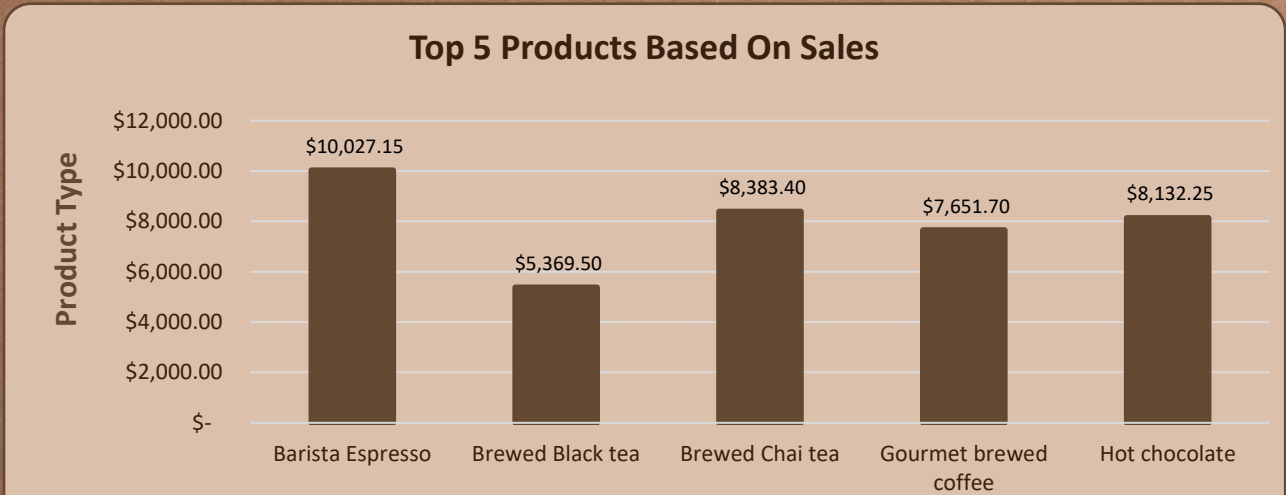

- The Total Sales Revenue for each month is shown in given chart:

- The Sales vary around 2k-3k among the store locations.

- The average price /person is \$4.69.
- These are the top 5 best selling products:

- The highest Sales generated by product type coffee and the minimum generated by product type packaged chocolates.

Recommendation to increase the sale:

- According to this analysis to increase the sales we should run some discountal program on weekends.
- We can also run some combo products programs to attract customers. Make combination of high demanding products with less demanding products.
- We should give some discount on branded products to increase branded product's sales.
- We should run these offers mostly on evening time so that the evening sale will also increase.
